1 Introduction

Kawasaki Steel succeeded in manufacturing soft fer-

sintering conditions in terms of original adjusting methods of raw material properties and microstructure that determines the magnetic properties.

Analysis of the main causes of core losses at high fre-

	Temp. (°C)	MB4	MB3
Initial permeability μ_{iac}	23	2500 ± 25%	
Saturation flux density at 1200 A/m	23	520	510
	60	470	450
	100	400	390
Remanence	23	130	130
	60	88	90
	100	54	55
Coercivity	23	12.7	14.3
	60	9.0	10.2
